```
quitSaveDefault-package
```
Default Quit Save Action

Description

Allows the action taken by `quit(save="default")` to be queried and changed. People who don't like poluting their shell with aliases may wish to add `quit.save.default("no")` to their '.Rprofile'. Yes, this is clearly excessive, but hopefully someone will add an option to R or something.

Usage

```
quit.save.default(value = NULL)
```

Arguments

value   the (character) default save action as passed to [quit](#), one of `"no"`, `"yes"`, or `"ask"`. NULL (the default) means not to change it.

Details

Package:	quitSaveDefault
Type:	Package
Version:	1.0
Date:	2009-08-10
License:	BSD

When the package loads, it will automatically call `quit.save.default(getOption("quit.save.default"))` if that option is set.

Value

`quit.save.default` returns the current default save action.

[quit](#).

Examples

```
## Example ~/.Rprofile
options(defaultPackages = c(getOption("defaultPackages"), "quitSaveDefault"),
```

```
        quit.save.default="no")

# restore the default:
quit.save.default("ask")
```
